Matthew Walton

Fullstack and Frontend Developer

Springfield, MO | (417) 401-8145 | matwal42083@gmail.com | GitHub: matwal42083 | LinkedIn: matwal42083

Professional Summary

Certified Fullstack Developer strategically targeting Frontend engineering roles to establish a strong professional foothold and master client-side architecture before scaling into comprehensive backend and fullstack positions. Began coding journey through rigorous self-study in HTML and CSS before graduating from Fullstack Academy in 2023. Driven by a desire to push beyond standard bootcamp curriculum, independently advanced into AI development and architected the Antivibe Code Agentic AI Workflow—championing a strict Specification-Driven (SDD) and Test-Driven Development (TDD) approach. Leverages 18.5 years of patient-focused healthcare and 6 years of strict, metric-driven logistics to bring process-discipline, analytical problem-solving, and cross-functional empathy to software development teams.

Technical Skills

- **Frontend:** JavaScript (ES6+), React, HTML5, CSS3, Vite
- **Backend & Database:** Node.js, Express.js, PostgreSQL (3rd Normal Form)
- **Testing & Environment:** Jest, React Testing Library, WSL 2 Ubuntu Linux, Git, GitHub Flow
- **Methodologies:** Specification-Driven Development (SDD), Test-Driven Development (TDD), Learn-Driven Development (LDD), Agentic AI Workflows

Technical Projects & Architecture

Antivibe Code Agentic AI Workflow:

- Designed a scalable Biological/Artificial Intelligence workflow, seamlessly transitioning between a foundational 50/50 collaborative partnership and a high-velocity 75/25 autonomous configuration (where the AI scaffolds all function components for increased speed), while retaining core directing, reviewing, and decision-making authority over the AI.

- Pioneered "hyper typing" methodologies within the IDE, leveraging AI-driven auto-suggestion and autopilot triggers to rapidly complete syntax (tab-completion) after manually initiating logic, drastically optimizing development velocity.
- Implemented a strict "Zero Code Generation" mandate for autonomous agents, forcing AI to generate build specifications, test suites, and line-by-line instructional comments while BI executes final implementation.
- Structured a highly organized seven-stage Master Build Artifact pipeline across CLI and IDE surfaces to enforce quality control, architectural integrity, and strict SDD/TDD loops.
- Maintained complete transparency and control over code logic by manually driving implementation and rigorously reviewing all AI suggestions, providing the flexibility to scale AI autonomy up or down based on speed requirements.

Developer Portfolio Application

- Building a responsive mutli-page web application using React, Vite, and modern CSS practices.
- Implementing comprehensive unit and integration testing using Jest and React Testing Library to ensure component reliability.

Professional Experience

Fulfillment Associate | Amazon STL3, Springfield, MO

- Executed high-precision logistics and inventory management, consistently adapting to rigorous, metric-driven operational environments.
- Operated complex machinery (Order Pickers) in Single and Very Narrow Aisle paths while troubleshooting workflow bottlenecks in real-time.

Certified Nursing Assistant / Behavioral Health Tech | Lakeland Behavioral Health System & Healthcare Sector

- Delivered direct patient care, consultation, and behavioral support over an 18.5-year career.
- Honed advanced communication and de-escalation skills, actively listening to diverse individuals to accurately assess and meet their specific needs.
- Maintained strict adherence to protocols, compliance standards, and documentation requirements.

Education & Continuous Learning

Independent AI & Fullstack Development Study | Present

Continuously expanding beyond standard curriculum to master agentic AI development, LLM orchestration, and advanced JavaScript/React paradigms using platforms like freeCodeCamp and Codecademy.

Fullstack Web Development Certificate | Fullstack Academy (Feb 2023 – Oct 2023)

Completed intensive software engineering bootcamp through the Amazon Career Choice program.

Foundational Web Development | Self-Directed Study

Initiated coding journey by independently teaching myself HTML and CSS foundations prior to formal bootcamp enrollment.
